Aug 17, 2017

Contents

1	Starring	3
2	Getting Started	5
2.1	Install	5
2.2	Extend	5
2.3	Load	5
3	Template Blocks	7
3.1	djfrontend_h5bp_css	7
3.2	djfrontend_twbs_css	7
3.3	djfrontend_twbs_js	7
4	Further Documentation	9
5	Contents	11
5.1	License	11
5.2	Changelog	11

Django Frontend Skeleton is a basic Django template skeleton built on [HTML5 Boilerplate](#) and [Twitter Bootstrap](#).

With the convenience of an installable Django application, create custom templates built on top of one of the most well-known, widespread templates (HTML5 Boilerplate) and a robust front-end framework (Twitter Bootstrap.)

Version 2.0.0 of Django Frontend Skeleton is a much simpler package - it's now just a small extended 'skeleton' template, which requires Django Frontend. No more duplication!

Package <https://pypi.python.org/pypi/django-frontend-skeleton>

Source <https://github.com/jonfaustman/django-frontend-skeleton>

CHAPTER 1

Starring

- HTML5 Boilerplate (based on 4.2.0)
- Modernizr (2.6.2)
- jQuery (1.10.2) and (2.0.3)
- Twitter Bootstrap (3.0.0)
- iOS-Orientationchange-Fix

CHAPTER 2

Getting Started

Install

1. install *django-frontend-skeleton* (pip install, add to your requirements files, etc.)
2. add ‘*djfrontend*’ and ‘*djfrontend.skeleton*’ to your INSTALLED_APPS
3. make sure ‘*django.contrib.staticfiles*’ is also in your INSTALLED_APPS

Extend

Extend the skeleton’s base template in your template(s)

```
{% extends 'djfrontend/skeleton.html' %}
```

Load

Load all the djfrontend tags if you want to add or change the template’s defaults.

```
{% load djfrontend %}
```

CHAPTER 3

Template Blocks

Template blocks provided by Django Frontend which are fundamental for Django Frontend Skeleton.

djfrontend_h5bp_css

Block to include { % djfrontend_normalize % } and/or { % djfrontend_h5bp_css % }.

djfrontend_twbs_css

Block to override the included Twitter Bootstrap CSS and responsive CSS files.

djfrontend_twbs_js

Override the included { % djfrontend_twbs_js % }.

CHAPTER 4

Further Documentation

For more documentation about Django Frontend [read the documentation](#).

Contents

License

MIT License

Component Specific Licenses

- HTML5 Boilerplate: MIT License
- Modernizr: MIT License
- Twitter Bootstrap: Apache License, Version 2.0
- jQuery: MIT License
- iOS-Orientationchange-Fix: MIT/GPL v2.0 License

Changelog

3.0.0

- Updated requirement to Django Frontend 1.0.0.
- Cleaned up documentation to reduce duplication.

2.0.1

- Updated requires to install at least django-frontend 0.3.1.

2.0.0

- Made Django Frontend Skeleton a much simpler package. It's now just a small extended skeleton template, which requires Django Frontend.
- Namedspaced skeleton, it's now 'djfrontend.skeleton'.
- Removed all static assets - they will be included in django-frontend.
- Removed base.html template - it will be included in django-frontend.
- Removed template tags - they will be included in django-frontend.

1.2.0

- Updated Twitter Bootstrap to v3.0.0
- Added djfrontend_twbs_theme_css template tag
- Added bootstrap-theme.css and bootstrap-theme.min.css
- Removed djfrontend_twbs_glyphicons template tag
- Removed bootstrap-glyphicons.css

1.1.1

- Twitter Bootstrap updated to v3.0.0 RC2

1.1.0

- jQuery updated to v1.10.2 and v2.0.3
- jQuery smooth-scroll updated to v.1.4.11
- Twitter Bootstrap (TWBS) updated to v3.0.0 RC1
- TWBS typeahead, glyphicons and bootstrap-responsive removed per TWBS v3.0.0 RC1

1.0.0

- There was wide-sweeping, non-backwards compatible changes - read carefully!
- Packaged renamed to djfrontend. This will affect INSTALLED_APPS settings as well as the static location.
- 'skeleton/base.html' is now 'djfrontend/skeleton.html'.
- Template tags combined into a single djfrontend.py.
- { % load djfrontend % } loads all template tags.
- 'bootstrap' renamed 'twbs' to reflect their branding change for 3.0.0.
- djfrontend_normalize, djfrontend_modernizr and djfrontend_jquery moved outside of h5bp to their own respective directories.
- djfrontend_twbs_css, djfrontend_twbs_responsive_css and djfrontend_normalize now require to be passed a version number.
- Every template tag namespaced with djfrontend_. Full name changes are below:

- skeleton_ios_fix → djfrontend_ios_fix
- h5bp_html → djfrontend_h5bp_html
- h5bp_css → djfrontend_h5bp_css
- h5bp_normalize → djfrontend_normalize
- h5bp_modernizr → djfrontend_modernizr
- h5bp_jquery → djfrontend_jquery
- h5bp_ga → djfrontend_ga
- bootstrap_css → djfrontend_twbs_css
- bootstrap_responsive_css → djfrontend_twbs_responsive_css
- bootstrap_js → djfrontend_twbs_js
- All optional settings namespaced with djfrontend_. Full name changes are below:
 - SKELETON_STATIC_URL → DJFRONTEND_STATIC_URL
 - H5BP_GA_SETDOMAINNAME → DJFRONTEND_GA_SETDOMAINNAME
 - H5BP_GA_SETALLOWLINKER → DJFRONTEND_GA_SETALLOWLINKER
- Some template are now namespaced with djfrontend_. Full name changes are below:
 - h5bp_css → djfrontend_h5bp_css
 - bootstrap_css → djfrontend_twbs_css
 - h5bp_jquery → djfrontend_jquery
 - bootstrap_js → djfrontend_twbs_js
 - h5bp_ga → djfrontend_ga
 - ios_fix → djfrontend_ios_fix

0.7.2

- Update to jQuery 1.10.1 and 2.0.2 (HTML5 Boilerplate)
- Update docs to include SKELETON_STATIC_URL.
- Include individual licenses.

0.7.1

- Update to Twitter Bootstrap 2.3.2 (Twitter Bootstrap)

0.7.0

- Added jQuery 2.0.0 (HTML5 Boilerplate)
- Added SKELETON_STATIC_URL for optional dedicated static server/CDN setting
- Added Road Map

0.6.0

- Remove Google Analytics protocol check (HTML5 Boilerplate)
- Update Normalize.css to 1.1.1 (HTML5 Boilerplate)
- Update to Twitter Bootstrap 2.3.1 (Twitter Bootstrap)
- Added H5BP_GA_SETDOMAINNAME and H5BP_GA_SETALLOWLINKER for optional Google Analytics customization (HTML5 Boilerplate)
- iOS-Orientationchange-Fix moved out of base.html
- iOS-Orientationchange-Fix now { % skeleton_ios_fix % }
- Created ‘skeleton’ template tag library

0.5.0

- Update to jQuery 1.9.1 (HTML5 Boilerplate)
- Update to Twitter Bootstrap 2.3.0 (Twitter Bootstrap)

0.4.0

- Update to jQuery 1.9.0 (HTML5 Boilerplate)
- Update to Normalize.css 1.1.0 (HTML5 Boilerplate)
- Update h5bp.css (HTML5 Boilerplate)
- Include changelog

0.3.0

- Namespace static files under ‘skeleton’
- Remove trailing slash from MANIFEST.in
- Documentation update/improvement

0.2.0

- Update to Twitter Bootstrap 2.2.2 (Twitter Bootstrap)
- Fix Glyphicons URL (Twitter Boostrap)
- Add documentation
- Minimize Readme

0.1.0

- Initial release
